

Production Powder Coating Line

We have created our own in-house, high volume conveyoized powder coating system, ideal for your production runs. Our electronic powder coating process features an iron phosphate spray wash to clean and prepare the part surface to ensure adhesion of the coating. Then we move the parts through the bake oven to cure the coating, resulting in a durable attractive finish.

Wide variety of powder types, colors and textures available:

- Hybrids, epoxies, polyesters, urethanes
- Hundreds of colors: primary, metallic, florescent
- Matte to high gloss finishes, including textures
- Options for both indoor and outdoor applications

How Can We Help?

If you have a project in the pipeline, or one that's been sitting on your desk with a big "how do I achieve that" question over it, why not get in touch and see what we can do.
